

About us

EMC Electronic Media Communication SA is headquartered in San Antonino, Switzerland. The Company was founded in 1997 following a Management Buy-Out of the engineering division of the regional CATV network operator. With more than 20 years experience in designing and manufacturing CATV equipment, EMC's business today is to provide innovative communications solutions which fulfil high requirements for performance, operational stability and cost-effectiveness.

Competence

Our expertise and experience is best know for designing, manufacturing highly integrated fiber optic products for the transmission of analog, digital TV signals and digital transmissions systems. The Company provides a complete line of optical based products to be used in a wide range of CATV architectures and broadband access.

Designed to provide present and future needs to residential customers, *SUBONET* allows CATV operators to cost-effectively deploy fiber to the home today, while also future-proofing their networks.

Innovation

We are committed to innovative solutions. All EMC fiber optic products are customer oriented designs meeting the customer and market requirements. Backed by a dedicated team of engineers, EMC excel in designing and producing outstanding product solutions to meet individual customer requirement. In IP-based networking solutions, EMC's strategy is to offer customer-specific solutions which are based on open standards. The products and suppliers selected are regarded as representing the best features and solutions in each area of application.

Customer oriented

We build our reputation by developing cost effective and reliable products in straight collaboration with our customers. Our completeness, the flexibility and high level of expertise of our engineers make us an attractive partner for network operators.
